***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-8 and 27-31 are, drawn to a method for driving a liquid crystal cell with a low voltage signal comprising a value obtained via a single variable linear function for temperature compensation, classified in class 345, subclass 101.
  - II. Claims 9, 12-14 and 17-19 are, drawn to a liquid crystal cell structure comprising a plurality of micromirrors on a substrate and a partial polarization rotation retarder, classified in class 349, subclass 117.
  - III. Claims 20 and 22—25 are, drawn to a liquid crystal system comprising a polarization beam splitter and a drive circuitry having a processor and at least two frame buffers to provide frame updates to the liquid crystal cell, classified in class 345, subclass 99.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I-III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, the different inventions In the instant case, the different inventions I-III they do not have to be used together since they have different modes of operations drawn to different aspects of the invention.

Art Unit: 2629

3. Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mike Fatahiyar whose telephone number is (571)272-7688. The examiner can normally be reached on Monday-Friday from 9:30 to 6:00.
